

LUMI F07

A.Saggia&V.Sommella

Designers Saggia&Sommella aimed to create a collection of white-blown glass fixtures that exceeded the typical globe shape. The result was Lumi, a collection of 4 softly shaped fixtures, featuring delicate, satin finish blown glass diffusers: Baka, Mochi, Mycena, and Sfera.

The collection includes a series of pendants, ceiling, wall, table, and floor lamps in multiple styles and sizes, as well as Cappello, spun aluminum accessory caps for Baka, Mochi, and Sfera pendants, all for indoor use. Lamp-type selections include 120V LED, G9, E26 versions, and High-Performance 120-277V configurable fixtures that allow the user to select their LED characteristics, finish color, and power supplies. In addition to the typical applications, the Mycena series allows designers to create multi-light compositions.

Our master glass artisans carefully craft each satin-finish white glass diffuser to ensure they provide soft and evenly diffused illumination. The soft shapes are the ideal elements to transform the look of every application with an elegant and classic touch. The Lumi collection is stocked in the United States and ready for quick shipment.
